Rodrigo Matos Silva

Executive manager no Grupo Casas Bahia
São Paulo, São Paulo, Brazil

Summary

I have been working in technology since 2003, specializing in software development, software architecture, and project management. I have a bachelor's degree in Computer Science, a post-graduate degree in Software Architecture and an unfinished master's degree in Electrical Engineering. I have solid knowledge in Java technologies and some experience with .NET technology, Big Data and Cloud Computing

Throughout my career, I have worked in companies of various sizes, from small to large multinationals. I had the opportunity to experience an international experience in a software factory, which broadened my knowledge and skills in a global environment.

In addition to my technical skills, for the last 5 years I have been dedicated to team management. My work is based on agile methodologies, seeking to promote collaboration and delivery of quality software. I have experience in negotiation, project implementation, system and team performance management, and I am always looking for continuous improvement.

I also have a passion for education, I worked as a professor in higher education courses from 2011 to 2017, sharing my knowledge and contributing to the formation of new professionals in the Information Technology area.

My professional career has given me solid skills in software development, coding, architecture, testing, implementation, requirements gathering and data modeling. I am a committed professional, adaptable, and always looking for challenges that allow me to grow and contribute to the success of the organizations I work for.

I am passionate about tackling the challenges of highly scalable and high-demand systems, such as high-traffic applications. I have

experience dealing with the complexity and challenges that arise when dealing with large volumes of data and concurrent users. I believe that the ability to scale and enhance these systems quickly and with low impact are critical to an organization's success.

I am motivated and excited to be part of challenging projects where I can apply my people management expertise to drive teams to achieve exceptional results.

Experience

Grupo Casas Bahia

Software Engineering Executive Manager
July 2022 - Present (4 years)
São Paulo, Brasil

I work in the Business Capabilities area, leading and contributing to the technological transformation of the company’s most strategic fronts — Marketplace, Financial Services, Commercial Intelligence, Payments, Anti-Fraud, and Consumer Credit (CDC), supporting all sales channels of Grupo Casas Bahia (physical stores, e-commerce, and B2B).

More than just delivering technology, our mission is to prepare the company's future — by shaping people, processes, and platforms with a long-term vision and a strong focus on business value.

Key pillars of our work:
Strategic leadership: Structuring 5 tribes and 25 squads with over 170 people, aligning engineering, product, and data to drive the company's transformation agenda. We count on strategic partners to help us in this mission!

Scalable technology foundation: Continuously evolving digital and financial journeys with robust solutions, from legacy systems to the cloud.

Business integration: Close collaboration with key business areas, focusing on delivering customer value and tangible results for the group.

Growth-enabling platforms: CDC Online, billing portal, biometrics, gateways, and financial solutions integrated across the ecosystem.

Culture of collaboration and influence: Promoting a culture that connects technology, product, and business with autonomy, ownership, and systemic thinking.

Data-driven and impact-oriented management: Leveraging tools like Gemini and Copilot to support decision-making and accelerate organizational learning.

We are building a team that turns technology into a competitive advantage — with consistency, purpose, and scale.

Americanas S.A.

5 years 7 months

Engineering Manager

July 2021 - July 2022 (1 year 1 month)

São Paulo, Brazil

Responsible for platform and team leadership in the Call Center and Digital Channels, focusing on;

- Career planning and promotions
